

HESI TNT Complex

HESI **TNT Complex** is a high quality plant fertiliser for green potted plants, flowering plants and in particular orchids.

TNT Complex is particularly effective, but very gentle to plants. One reason for this is that the nitrogen is almost 100 % organic (urea), and thus protects the sensitive orchids. In this way, among other benefits, the plants are loaded with a minimum of salt, which is optimal for young plants and especially orchids.

HESI Wurzel-Complex, HESI TNT-Complex and HESI SuperVit complement each other ideally.

Composition: NPK 3 + 2 + 3

Nitrogen 3 % N, phosphorus 2 % P₂O₅, potassium 3 % K₂O,

others: magnesium, calcium, sulphur and

trace elements: iron, manganese, zinc, copper, boron, molybdenum in complex-bound stable form, plus Vitamins B1, B2, B3, B12, plant sugars, amino acids

Dosage:

small and sensitive orchids: 10 ml / 10 litre nutrient solution

vigorous orchids: 25 ml / 10 litre nutrient solution

other plants: 50 ml / 10 litre nutrient solution

During the growth phase (spring to autumn), fertilising can be carried out with 25 ml TNT /10 litre water without hesitation, in winter with 10 ml / 10 litres.

ATTENTION: important information!!!

The nitrogens contained in **TNT Complex** are almost completely of organic origin. Thus, they are not to be determined through the conductance.

Do not dispense with the EC device!!!
