

HESI BOOST - Flowering Accelerator

HESI BOOST complete organic fertilizer to the intensification of the flower.
A blend of fruit enzymes, plant sugars and fruit

HESI BOOST is a very effective flowering stimulator.
It makes for a rapid initiation of flowering and larger flowers.

HESI Boost is suitable for all media.

This specially designed combination of nutrients increased the leaf density, reduces the sheet separations and supports the plants energy for a powerful compact habit.

HESI Boost is a bloom activator and, at the same time, a gentle leaf fertiliser for the flowering phase. It strengthens the flowering, increases the sugar content of fruits and improves the condition of the entire plant.

Dosage:

at the beginning of flowering:

once 2ml per 1 liter of nutrient solution (douse, water),
or as leaf nutrition 1 ml per 1 liter of nutrient solution.

to prolong the flowering:

once 2ml per 1 liter of nutrient solution (douse, water),
or as leaf nutrition 1 ml per 1 liter of nutrient solution.

Composition:

Contains fruit extracts, fruit enzymes like galactol, plant sugars like melitose and alginic acid, and more. Minerals such as potassium, phosphorus, magnesium, calcium and trace elements like iron from natural origin.

Storage: Keep locked up and out of reach of children - dark at 5°C - 22°C.
Ensure that it is properly closed.

Package sizes: 0,5 L / 1 L / 2,5 L / 5 L / 10 L

HESI Tip:

HESI Boost is extremely effective and should not be used more intensively than indicated here.
Excessive use of **HESI Boost** makes the plumes feel sticky.

Can also be used after total loss of flowers through environmental factors and can be used with newly purchased plants.
