

HESI Bloom Complex with pH correction

HESI **Bloom Complex** is a high quality enriched fertiliser optimized for flowering plants.

Bloom Complex contains additional vital elements that are active for blooming; these increase the plant's energy and maintain healthy flora in the soil and roots.

HESI **Bloom Complex** contains **pH correction**, which changes the fertiliser solution to a slightly acidic pH value optimal for the plants.

HESI **Bloom Complex** is recommended for orchids during flower formation to offset the increased need for phosphorus and potassium. This can be optimized 1 - 2 times by the addition of **HESI Phosphorus Plus**.

HESI Bloom Complex and its pH-correction work well together with HESI Phosphorus Plus.

Composition: NPK 3+3+4

Nitrogen 3.0% N, phosphorus 2.6% P₂O₅, potassium 3.6% K₂O

Other: magnesium, calcium, sulphur

trace elements: iron, magnesium, zinc, copper, boron, molybdenum, iodine and cobalt in complex-bound form.

Plus Vitamins B1, B2, B6, plant sugars, amino acids.

Dosage:

flowering orchids: 20 ml / 10 litre nutrient solution (+ 10ml **Phosphorus Plus** / 10 litre)

paniculated orchids: 25 ml / 10 litre nutrient solution (+ 10ml **Phosphorus Plus** / 10 litre)

other flowering plants: 50 ml / 10 litre nutrient solution (+ 10ml **Phosphorus Plus** / 10 litre)

Note:

HESI Bloom Complex's pH correction is also active together with **HESI Phosphorus Plus**. It changes the pH value to slightly acidic, optimal for the plants.
